Failure to Submit Initial Inventory to the State _ Template

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Reporting Requirements Not Met for GA2110001 BUCKHEAD

We were required to develop and submit to the State an initial Service Line Inventory that includes all service lines connected to the public water distribution system and characterize the materials of those service lines as either lead, galvanized requiring replacement, non-lead, or lead status unknown. Our system failed to submit an initial inventory of service lines to GA EPD by October 16, 2024.

Although the failure to report the initial inventory to the State does not create a risk to public health, we are required to inform you of this violation and provide additional information including what we did to correct the situation.

What Should You Do?

There is nothing you need to do at this time. You do not need to boil your water or take other actions. Remember, boiling water does not remove lead from water.

For more information on reducing lead exposure around your home/building and the health effects of lead, visit the EPA's websites at https://www.epa.gov/ground-water-and-drinking-water/basicinformation-about-lead-drinking-water and http://www.epa.gov/lead.

What Is Being Done? [Describe your corrective actions including when your water system expects to return to compliance or resolve the violation. For examples of corrective actions language, see the included PN Instructions.]

We completed the initial service line inventory and submitted it to GA EPD on 10/22/2024
